```java
1      import java.util.Objects;
2
3      public class Person {
4          private String name;
5          private int age;
6
7          public Person(String name, int age) {
8              this.name = name;
9              this.age = age;
10         }
11
12         @Override
13         public String toString() {
14             return  name +
15                     "(" + age + ")";
16         }
17
18         @Override
19         public boolean equals(Object o) {
20             if (this == o) return true;
21             if (o == null || getClass() != o.getClass()) return false;
22             Person person = (Person) o;
23             return age == person.age && Objects.equals(name, person.name);
24         }
25
26         public String getName() {
27             return name;
28         }
29
30         public int getAge() {
31             return age;
32         }
33     }
```
